

## VISA CHECKOUT

### **How is it more secure?**

Visa Checkout uses tokenization which means your real card number is replaced with a different number so that if the merchant is ever compromised, your real card number is not stored in their system anywhere and cannot be duplicated.

### **How does it work?**

By registering your CNB Visa debit or credit card you can make online purchases with a user I.D. and password instead of entering your card number each time.

### **Where can I use it?**

Visa Checkout is only for online purchases and some in-app purchases.

### **Why should I enroll in Visa Checkout?**

Since EMV chip technology does not apply to online purchases, using Visa Checkout helps protect your card from online fraud.

### **Which merchants are currently participating in Visa Checkout?**
